01

PURPOSE & BACKGROUND

PURPOSE

To document the business requirements for improving and digitizing the library's book reservation process.

BACKGROUND

The current reservation process is manual. Customers need to visit the library and use a paper register to reserve unavailable books, while librarians manually monitor reservations and contact customers by phone. This results in approximately 11 minutes of customer effort per reservation and 5 hours of staff effort per week.

02

BUSINESS OBJECTIVES

The objectives of the proposed system are to :

- Reduce the customer's reservation time from approximately 11 minutes to 3 minutes.
- Reduce library staff effort from approximately 5 hours to 1 hour per week.
- Provide customers with better visibility of their reservation status.
- Automate notifications when reserved books become available.

03

SCOPE

SCOPE

SCOPE IN

- Book Search & Availability.
- Book Reservation & Status Management.
- Automated Notifications

SCOPE OUT

- Online payment or membership-fee processing.
- Home delivery of books.
- Fine management

04

FUNCTIONAL REQUIREMENTS

FUNCTIONAL REQUIREMENTS

ID	Functional Requirement	Priority	Acceptance Criteria
FR-01	The system shall allow customers to search for a book by its title or author and view its availability status.	Must Have	Given a valid book title or author, when the customer searches, the system shall display the matching book and its current availability status.
FR-02	The system shall allow customers to reserve an unavailable book and automatically add the customer to the reservation queue.	Must Have	Given that a book is unavailable, when the customer submits the reservation, the system shall create a reservation and assign the customer a queue position.
FR-03	The system shall notify the customer when their reserved book becomes available.	Must Have	Given that a reserved book becomes available, the system shall automatically send a notification to the customer using their registered contact details.

05

► ASSUMPTIONS

- Customers have a valid library membership.
- Customer contact details are available in the library system.
- Library staff will update book availability when books are returned.

► CONSTRAINTS

- Customer information must be protected according to applicable privacy requirements.
- Library staff may require basic training to use the new system.

EPIC, STORIES & TASKS

Epic : Digitize and Streamline Library Book Reservation Process

EPIC, STORIES & TASKS

ID	Story	Est. Size	Sample Tasks
ST-01	As a library customer, I want to search for books, view their availability, and reserve an unavailable book through the library application, so that I can reserve a book without visiting the library.	5 pts	Build book search and availability interface; Create reservation form; Add reservation to the queue
ST-02	As a library customer, I want to view my reservation status and queue position, so that I can track my reservation without contacting the library.	3 pts	Build reservation status page; Display current queue position/status; Update customer view when reservation status changes
ST-03	As a librarian, I want to update a book's availability when it is returned and process the next reservation in the queue, so that reserved books can be allocated to the next customer efficiently	5 pts	Update book status when a book is returned; Identify the next customer in the reservation queue; Trigger notification to the customer when the book becomes available

THANK YOU
